EDUCATION

DE LA SALLE UNIVERSITY

Manila, Philippines

BS in Computer Science Major in Software Techonology

2022 – Present

Expected Graduation Date: September 2026

Dean's Lister 2024, 2025

Relevant Coursework: Website Development; Software Engineering;

Artificial Intelligence; Information Management; Web Development; Database Management

TECHNICAL PROJECTS

EVERYTHING SALE INVENTORY

Frontend Developer

- Developed a sales inventory web application to track stocks, orders, and business trends, leveraging Express.js, Handlebars, TailwindCSS, and MongoDB.
- Implemented and maintained automated tests with Jest to ensure application reliability and code quality.
- Collaborated closely with UI/UX designers and back-end developers to deliver responsive and customer-aligned web solutions.

BRIDGE BUILDERS

Quality Assurance

- Tested core application features end-to-end, including child intake, intervention tracking, and archival workflows to ensure alignment with NGO operational needs.
- Designed and executed comprehensive test cases for over 20 functional requirements, covering form validation, user roles, and data flow logic.
- Performed manual testing and exploratory testing on dynamic intake forms to ensure accuracy, completeness, and usability of 8+ page digital entries.
- Identified and documented UI/UX bugs and logic flaws through Jira to help developers improve user experience and system stability.

GREENHUB

- Developed a full-stack forum web platform for De La Salle University students to share interests and engage in discussions.
- Utilized Next.js, Tailwind CSS, and MongoDB to build a responsive, scalable, and data-driven application with modern UI and real-time performance.

PHILLEXBOT

- Built an interactive legal document chatbot using Streamlit, Qdrant, and LEGAL-BERT to handle user questions on contracts, rentals, and partnerships with high accuracy.
- Utilized Python and LLM frameworks, integrating preprocessing steps like data sanitization and chunk-based search for efficient information retrieval.

STEAM GAME RECOMMENDATION DASHBOARD

- Developed a Steam game recommendation web app using Next.js, Tailwind CSS, and MySQL, allowing users to filter games by price, playtime, and user feedback.
- Integrated advanced OLAP operations (Slice, Dice, Roll-up, Drill-down) to enable rich data exploration and visualizations, helping users discover trends and make informed choices.
- Improved MySQL query performance by optimizing joins, and indexing for faster data retrieval.
- Implemented end-to-end testing with Playwright to ensure functionality, reliability, and query performance.

SKILLS & INTERESTS

Technical: TypeScript, NextJS, React, Python, C++, Java, JavaScript, CSS, HTML, ExpressJS, MongoDB, MySQL

Interests: Programming, Web Development, Software Engineering, Software Quality Assurance, Cloud Computing
